## Abstracts

According to our (Global Info Research) latest study, the global Molecular Sieves market size was valued at USD 3910530 million in 2023 and is forecast to a readjusted size of USD 5212740 million by 2030 with a CAGR of 4.2% during review period.

Molecular sieves are the material with small pores of uniform size. Molecular Sieves are crystalline alumino- silicates known as Zeolites. Molecular sieves crystals characterized by three-dimensional pore systems along with same crystals identified together.

Molecular sieves are used as absorbents for fluids (gas and liquids). Molecular sieve absorbents have ability to separate fluids on the basis of molecular size and polarity. In case of hydrocarbon parafines, straight molecules fit into pores and get adsorbed. The branched molecules can't fit into pores and pass through sieve bed.
