Abstracts

The global M.2 Connectors market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

M.2 connectors are devices used to interface with M.2 slots, typically found in solid-state drives (SSDs), wireless network cards, Bluetooth modules, and other small electronic devices. These connectors are designed with high-density connections, featuring small form factors and versatility, enabling high-speed data transfer and communication functionalities within electronic devices. These connectors often support various interface standards such as PCI Express (PCIe) and SATA, with different keying and sizes to accommodate different M.2 devices. They are widely used in various computer devices and embedded systems, facilitating efficient data transfer and performance.

M.2, pronounced m dot two and formerly known as the Next Generation Form Factor (NGFF), is a specification for internally mounted computer expansion cards and associated connectors. M.2 replaces the mSATA standard, which uses the PCI Express Mini Card physical card layout and connectors.

This report studies the global M.2 Connectors production, demand, key manufacturers, and key regions.
