Abstracts

According to our (Global Info Research) latest study, the global M65J Grade Carbon Fiber market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

M65J-grade carbon fiber refers to high-strength and high-modulus carbon fiber with a tensile strength of nearly 4000MPa and a modulus of more than 630GPa. Compared with the T-grade series carbon fiber, M65J-grade carbon fiber has the advantages of good thermal stability, small material deformation, high/low temperature resistance, and good toughness. It has extremely high application value in aerospace, high-end civilian products, and national defense and military industries. Graphitization is a key link in the production of M65J-grade carbon fiber, and the ultra-high temperature graphitization furnace is its main production equipment. The maximum operating temperature of a conventional ultra-high temperature graphitization furnace is 2800?, which cannot meet the production of M65J-grade carbon fiber. In recent years, with the continuous improvement of ultra-high temperature graphitization furnace technology, its operating temperature has reached above 3000?, which will provide favorable conditions for the development of the M65J-grade carbon fiber industry.
