According to our (Global Info Research) latest study, the global M8 Grade Resin market size was valued at US\$ 1157 million in 2025 and is forecast to a readjusted size of US\$ 1765 million by 2032 with a CAGR of 6.1% during review period.

M8 grade resin refers to an advanced low-loss resin system used in high-frequency and high-speed PCB laminates, positioned between conventional high-speed materials and next-generation M9 grades. It is typically based on hydrogenated hydrocarbon resin systems, sometimes combined with modified epoxy or PPE/PPO, and is designed to meet the signal-integrity requirements of 400G-class data transmission. M8 resins offer low dielectric constant and low dissipation factor, good thermal reliability, and stable processing performance, making them widely used in AI servers, network switches, and high-speed backplanes. In 2025, global M8 Grade Resin production reached approximately 15200 tons, with an average global market price of around US\$104 k usd per ton. The production capacity for M8 Grade Resin in 2025 was approximately 16000 tons. The typical gross profit margin for M8 Grade Resin is between 20% and 40%.
