The global M&A Cyber Due Diligence market size is expected to reach \$ 8426 million by 2032, rising at a market growth of 6.1% CAGR during the forecast period (2026-2032).

M&A cyber due diligence is the process of evaluating the cybersecurity risks and vulnerabilities of a target company during a merger or acquisition. This involves assessing the target company's cybersecurity policies, procedures, infrastructure, and overall security posture to identify any potential risks that could impact the deal. The goal of M&A cyber due diligence is to identify any potential cybersecurity risks that could impact the value of the deal or pose a threat to the acquiring company's own security posture. By conducting a comprehensive assessment of the target company's cybersecurity practices, the acquiring company can make informed decisions about the deal and take steps to mitigate any identified risks.

M&A Cyber Due Diligence has become a critical component of merger and acquisition processes as cyber risk awareness and regulatory scrutiny increase globally. Trends include the integration of automated cybersecurity assessment tools, AI-driven risk analytics, cloud security evaluations, and continuous monitoring during the deal lifecycle. Key opportunities arise from growing regulatory compliance requirements, heightened investor sensitivity to cyber risks, expansion of cross-border transactions, and increasing demand from mid-market and large enterprises seeking to mitigate post-merger cybersecurity incidents. Challenges include rapidly evolving cyber threats, inconsistent data quality, complex IT environments, limited access to proprietary security information, high variability in assessment standards, and the need to balance thorough analysis with deal timing pressures.
