The global Machine Tool Peripheral Equipment market size is expected to reach \$ 11126 million by 2032, rising at a market growth of 5.2% CAGR during the forecast period (2026-2032).

Machine tool peripheral equipment refers to a series of auxiliary devices and components that cooperate with machine tools to improve processing efficiency, ensure processing accuracy, and expand the functional scope of machine tools. It does not include the core body of the machine tool itself, but covers a variety of supporting equipment such as tool changers, chip conveyors, coolant systems, dust removal devices, fixture clamps, and numerical control system accessories. These peripherals are closely integrated with machine tools, responsible for auxiliary operations such as tool storage and replacement, chip cleaning, cooling and lubrication, dust and waste treatment, which are essential for the stable, efficient and safe operation of machine tools, and play a key role in improving production efficiency, reducing manual operation intensity, and ensuring the quality of processed products.

The demand for machine tool peripheral equipment is closely linked to the development of the machine tool industry, the upgrading of manufacturing industry, and the promotion of intelligent production. With the acceleration of industrial intelligence and the continuous expansion of the manufacturing industry, enterprises have higher requirements for the efficiency, precision and intelligence of machine tool operations, which directly drives the growing demand for high-performance peripheral equipment—especially intelligent peripherals such as automatic tool changers, intelligent chip conveyors, and online detection devices. The business opportunities lie in focusing on the R&D and production of intelligent, energy-saving and high-precision peripheral products, cooperating with machine tool manufacturers to provide matching supporting

solutions, expanding the application scenarios of peripherals in high-end manufacturing, intelligent workshops and other fields, and meeting the personalized needs of enterprises for different types of machine tool peripherals, while optimizing after-sales service to enhance market competitiveness.
