A machine vision bar light is a linear LED illumination device designed for industrial automation inspection and image processing systems. It provides uniform and controllable strip lighting to enhance surface features and edge contrast of the target object, thereby improving the accuracy and stability of image recognition. Bar lights are commonly used in applications such as inspecting elongated workpieces, print quality, electronic component pins, and surface scratches on metals, especially where highlighting textures or edges is essential. By adjusting the illumination angle and mounting position, bar lights can achieve bright-field or dark-field lighting effects to meet various inspection requirements.
