Abstracts

According to our (Global Info Research) latest study, the global Machining CAM Software market size was valued at US$ 3072 million in 2024 and is forecast to a readjusted size of USD 4980 million by 2031 with a CAGR of 7.2% during review period.

Machining CAM software is a software that uses computers to manage, control and operate production equipment. Its input information is the process route and process content of the part, and its output information is the tool path (tool path file) and NC program during machining.

??

??

The major factors driving the market are high utilization of CAM solutions in the machine tool industry; widespread adoption of cloud technology; increasing demand for automated manufacturing processes; increasing demand for faster production processes; consumer demand for improved product designs Increasing.

Industry-based computer-aided manufacturing software market is segmented into aerospace & defense, automotive, energy, equipment manufacturing, and others. Of these, the aerospace and defense industry is expected to witness the fastest growth over the forecast period. This is mainly attributable to the growing demand for high-performance cutting (HPC and high-speed cutting (HSC function: reduced machining and programming time)) and the growing use of CAM software in various processes such as 5-axis milling, milling and automation CNC programming of cavities and holes
