Abstracts

Macrolide antibiotics are a particular type of antibiotic used to treat, and sometimes prevent, a wide variety of bacterial infections. Macrolide antibiotics stop bacteria multiplying by preventing them from being able to produce proteins that are essential for their growth. The bacteria eventually die or are killed by your immune system.

SCOPE OF THE REPORT:

This report focuses on the Macrolide Antibiotics in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application. Macrolide antibiotics are used to treat infections caused by Gram-positive bacteria (e.g., *Streptococcus pneumoniae*) and limited Gram-negative bacteria (e.g., *Bordetella pertussis*, *Haemophilus influenzae*), and some respiratory tract and soft-tissue infections. The antimicrobial spectrum of macrolides is slightly wider than that of penicillin, and, therefore, macrolides are a common substitute for patients with a penicillin allergy.

The worldwide market for Macrolide Antibiotics is expected to grow at a CAGR of roughly xx% over the next five years, will reach xx million US\$ in 2023, from xx million US\$ in 2017, according to a new GIR (Global Info Research) study.
