Abstracts

Magnesia-alumina brick refers to a basic refractory material made of magnesia and industrial lead oxide or bauxite as raw materials, crushed, shaped, and fired at about 1600 °C. The refractoriness is greater than 2000°C, the resistance to rapid cooling and rapid heating is better than that of magnesia bricks, and it can resist the erosion of alkaline slag. It is used for masonry roofs of basic open hearth furnaces and electric furnaces in steelmaking.
