Abstracts

The global Magnesia Alumina Spinel market size is expected to reach \$ 271 million by 2032, rising at a market growth of 4.3% CAGR during the forecast period (2026-2032). Magnesium aluminum spinel is a refractory material made of spinel synthesized artificially from magnesium oxide and alumina. This raw material is rarely found in nature, and all industrial magnesium aluminum spinel is artificially synthesized. Aluminum alumina based sintered magnesia alumina spinel is made by using high-quality alumina with an Al₂O₃ content of over 76% and high-quality lightly burned magnesium powder with an MgO content of over 95%. After multi-stage homogenization process, it is sintered at a high temperature of over 1800 °C in an ultra-high temperature tunnel kiln. It has good corrosion resistance, strong corrosion and peeling ability, good slag resistance, abrasion resistance, good thermal shock stability, high temperature resistance and other performance characteristics. In 2025, global Magnesia Alumina Spinel production reached approximately 287 K MT, with an average global market price of around US\$ 685 per MT.

The current market for magnesia alumina spinel is primarily driven by technological advancements in the global steel and construction industries. Chinese manufacturers hold significant advantages in production capacity and technology, while international leaders focus on high-end product development. The industry is evolving towards enhanced material performance, optimized production processes, and expanded applications, with particular attention to its potential in emerging sectors like new energy. Accelerating industrial development in regions like Southeast Asia also presents new growth opportunities.

Metallurgical industry: Magnesium aluminum spinel is commonly used as an inner lining for high-temperature equipment such as steelmaking and electric furnaces, providing reliable fire resistance. ?

Cement industry: In cement rotary kilns, magnesia alumina spinel bricks are used as

lining materials, which have good kiln skin hanging performance and thermal shock stability, and can extend the service life of the kiln. ?

Glass industry: Magnesium aluminum spinel can be used as the lining of glass melting furnaces to resist the erosion of high-temperature molten glass and improve production efficiency.
