According to our (Global Info Research) latest study, the global Magnesium Alloy Sacrificial Anode market size was valued at US\$ 645 million in 2024 and is forecast to a readjusted size of USD 935 million by 2031 with a CAGR of 5.5% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Magnesium alloy, with its extremely high electrochemical properties, has become an ideal sacrificial anode material. Its small size is uniform, long lifespan, and unit mass power generation is up to, making it suitable for cathodic protection of metal structures in soil and freshwater media. The extruded magnesium anode used in water heaters can effectively protect the inner tank of the water heater and has the function of removing scale from the inner tank. Magnesium alloy sacrificial anode products are divided into two categories: casting (AZ63) and extrusion (AZ31).
