Abstracts

The global Magnesium Alloy Sheet market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Magnesium alloy sheet has excellent microstructure and mechanical properties, but there are many factors restricting its development. The most important ones are the low slip system of magnesium and poor plastic deformation ability at room temperature. Only when the temperature rises above 220 °C can magnesium alloy obtain better Good deformation ability. Therefore, multiple heatings are often required during the thermal processing of magnesium alloys. Compared with the production of extrusions and forgings, the rolling of magnesium plates is more difficult, mainly reflected in the fact that the plates are prone to cracks during the rolling process. , The product has anisotropy, small pass reduction, low production efficiency, and low yield.

This report studies the global Magnesium Alloy Sheet production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Magnesium Alloy Sheet, and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
