The global Magnesium Chloride Desiccant for Automotive Lamps market size is expected to reach \$ 317 million by 2032, rising at a market growth of 4.6% CAGR during the forecast period (2026-2032).

The Magnesium Chloride Desiccant for Automotive Lamps is a highly efficient moisture absorbent. Its main component is magnesium chloride, which is used to absorb moisture inside the car headlights, preventing fogging and condensation on the lens, keeping the interior dry, thereby protecting the lamp assembly and extending the lifespan of the headlights. Its characteristics include strong moisture absorption, solidification into a solid block after absorbing moisture with no liquid water leakage, making it safe and efficient.

The upstream core raw material is magnesium chloride, usually obtained through extraction from seawater brine or refining of salt lake brine.

In 2025, global sales are projected to be approximately 409,200 tons, with an average market price of approximately US\$550 per ton. The industry's gross profit margin is in the range of 10%-25%.
