Abstracts

The global Magnesium Chloride Desiccant market size is expected to reach \$ 404 million by 2032, rising at a market growth of 4.4% CAGR during the forecast period (2026-2032).

The main raw material for magnesium chloride desiccant is $MgCl_2$, which is a high-purity active ingredient that is naturally biodegradable. It has a fast moisture absorption rate and a large moisture absorption capacity, with a maximum absorption capacity reaching 200%-300% of its own weight. Furthermore, the absorbed moisture is solidified and not released.

The upstream core raw material is magnesium chloride, which is usually a byproduct or intermediate product of salt chemical industry or magnesium metal smelting (such as sponge titanium production).

In 2025, the global sales volume is estimated to be approximately 532,000 tons, with an average market price of approximately US\$548 per ton. The industry's gross profit margin is in the range of 10%-25%.

This report studies the global Magnesium Chloride Desiccant production, demand, key manufacturers, and key regions.
