According to our (Global Info Research) latest study, the global Magnesium Chloride Desiccant market size was valued at US\$ 300 million in 2025 and is forecast to a readjusted size of US\$ 404 million by 2032 with a CAGR of 4.4% during review period.

The main raw material for magnesium chloride desiccant is $MgCl_2$, which is a high-purity active ingredient that is naturally biodegradable. It has a fast moisture absorption rate and a large moisture absorption capacity, with a maximum absorption capacity reaching 200%-300% of its own weight. Furthermore, the absorbed moisture is solidified and not released.

The upstream core raw material is magnesium chloride, which is usually a byproduct or intermediate product of salt chemical industry or magnesium metal smelting (such as sponge titanium production).

In 2025, the global sales volume is estimated to be approximately 532,000 tons, with an average market price of approximately US\$548 per ton. The industry's gross profit margin is in the range of 10%-25%.
