Abstracts

The eighth most abundant element in nature, magnesium constitutes 2.4 percent of Earth's crust. Because of its strong reactivity, it does not occur in the native state, but rather it is found in a wide variety of compounds in seawater, brines, and rocks. Among the ore minerals, the most common are the carbonates dolomite (a compound of magnesium and calcium carbonates, $\text{MgCO}_3 \cdot \text{CaCO}_3$) and magnesite (magnesium carbonate, MgCO_3). Less common is the hydroxide mineral brucite, $\text{Mg}(\text{OH})_2$, and the halide mineral carnallite (a compound of magnesium and potassium chlorides and water, $\text{MgCl}_2 \cdot \text{KCl} \cdot 6\text{H}_2\text{O}$). This report mainly covers magnesite and brucite. It has a silvery-white colour and tarnishes slightly in air.

SCOPE OF THE REPORT:

The Magnesium raw materials concentration is very high; there are major manufacturers in China. The manufacturers in China have a long history and unshakable status in this field. Manufacturers such as Magnezit have relative higher level of product's quality. As to China, Haicheng Megnesite has become as a global leader in the magnesite, Dandong Jinyuan has become as a global leader in the brucite. The China take almost a half of the whole revenue market share. We tend to believe this industry becomes more and more mature, and the consumption increasing rate will show a smooth curve.

The worldwide market for Magnesium Raw Materials (Magnesite and Brucite) is expected to grow at a CAGR of roughly 5.0% over the next five years, will reach 510 million US\$ in 2024, from 380 million US\$ in 2019, according to a new GIR (Global Info Research) study.

This report focuses on the Magnesium Raw Materials (Magnesite and Brucite) in global market, especially in North America, Europe and Asia-Pacific, South America, Middle East and Africa. This report categorizes the market based on manufacturers, regions, type and application.
