According to our (Global Info Research) latest study, the global Magnet Piston Seal market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

Piston seals are used to create a seal between the piston and the cylinder bore, preventing leakage of hydraulic fluid or air. This seal is internal to the cylinder and allows pressure to be maintained on one side of the piston, creating the force to move it back and forth. Magnetic piston seals are used when axial space is limited and operating conditions and requirements are beyond elastomeric or polymer seal capabilities.
