## Abstracts

The global Magnetic Absolute Encoder market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

A magnetic absolute encoder is an instrument for measuring rotational or linear motion that uses components such as a magnetic sensor and a magnetic ruler to convert the change in position into an output of absolute position information. Unlike incremental encoders, absolute encoders are able to maintain a record of position information after power failure without re-alignment.
