According to our (Global Info Research) latest study, the global Magnetic Bearings market size was valued at USD 278.5 million in 2023 and is forecast to a readjusted size of USD 505.6 million by 2030 with a CAGR of 8.9% during review period.

A magnetic bearing is a bearing that supports a load using magnetic levitation. Magnetic bearings support moving parts without physical contact. For instance, they are able to levitate a rotating shaft and permit relative motion with very low friction and no mechanical wear. Magnetic bearings support the highest speeds of all kinds of bearing and have no maximum relative speed.

Magnetic bearing technology is becoming more and more important as an alternative to conventional bearing supports, and is used when the technical requirements can no longer be fulfilled by other bearing types. This especially applies to industrial machinery with very high rotational speeds and shaft weights of up to several tons.

Global magnetic bearings key players include SKF, Schaeffler, Wauk Bearing, etc. Global top 5 manufacturers hold a share over 60%.

Europe is the largest market, with a share over 52%, followed by Americas and Asia-Pacific, both have a share over 47%.

In terms of product, active magnetic bearing is the largest segment, with a share over 93%. And in terms of application, the largest application is motors, followed by compressors, blowers, etc.
