According to our (Global Info Research) latest study, the global Magnetic Boiler Filter market size was valued at US\$ 1599 million in 2024 and is forecast to a readjusted size of USD 2000 million by 2031 with a CAGR of 3.6% during review period.

Magnetic boiler filter is a water purification device specially designed for boiler system. It uses a strong magnetic field to effectively absorb and remove magnetic impurities such as rust and metal particles in water, thereby protecting the boiler system from these impurities. If these impurities exist in the boiler for a long time, they will not only reduce the thermal efficiency, but also may cause system blockage, corrosion and other problems. The magnetic boiler filter achieves efficient purification of water quality through its unique magnetic filter medium, ensuring the stable operation of the boiler system. In addition, the device is also easy to clean and maintain, which greatly improves the convenience of use.
