According to our (Global Info Research) latest study, the global Magnetic Central Heating Filters market size was valued at US\$ 1599 million in 2024 and is forecast to a readjusted size of USD 2000 million by 2031 with a CAGR of 3.6% during review period.

Magnetic central heating filters are advanced water purification devices designed for central heating systems. They also rely on the powerful magnetic field effect to efficiently capture and remove various magnetic impurities in the heating circulating water, such as iron filings and metal particles. If these impurities accumulate in the heating pipes, they will not only reduce the heating efficiency, but may also cause serious consequences such as pipe blockage and equipment damage. Magnetic central heating filters effectively extend the service life of the heating system and improve the heating effect by continuously purifying the water quality. At the same time, its compact structure design and convenient maintenance method also make it an ideal choice for modern home heating systems.
