Abstracts

According to our (Global Info Research) latest study, the global Magnetic Chargers market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The magnetic charger installs the transmitting coil on the wireless charging base and the receiving coil on the back of the mobile phone. When the mobile phone is charged close to the charging base, the transmitting coil will generate an alternating magnetic field due to the connection of alternating current. The change in the magnetic field will cause an induced current in the receiving coil, which transfers energy from the transmitter to the receiver, and finally completes the charging process.
