According to our (Global Info Research) latest study, the global Magnetic Components of Charging Station market size was valued at US\$ 1262 million in 2025 and is forecast to a readjusted size of US\$ 3312 million by 2032 with a CAGR of 14.8% during review period.

Magnetic Components of Charging Station refer to electromagnetic devices such as inductors, transformers, and chokes that are integrated within the power conversion system of EV chargers to enable efficient energy transfer, voltage transformation, current regulation, and noise suppression, forming the essential functional backbone that converts grid electricity into stable and controlled power suitable for charging electric vehicle batteries. The unit price of magnetic components for charging stations is typically in the tens of dollars, with industry gross margins ranging from 20% to 35%.

The upstream supply chain of magnetic components for charging stations consists primarily of raw material suppliers providing copper wire, ferrite and other magnetic core materials, insulating materials, and precision processing equipment, which are then utilized by magnetic component manufacturers to design and produce inductors, transformers, and related devices, while the downstream includes power module integrators and EV charger manufacturers who incorporate these components into AC-DC and DC-DC conversion systems, ultimately delivering complete charging equipment to infrastructure operators such as public charging networks, commercial fleets, and residential installations, linking the magnetic component industry directly to the broader electric vehicle and energy ecosystem.
