The capsule endoscopy robot system project is the world's first actively controlled capsule endoscopy robot system technology. There is a major technological breakthrough for the actively controlled second-generation capsule endoscopy robot, which can significantly improve inspection results and performance through precise control and positioning. It is reliable, the examination of the stomach is very convenient, fast and comprehensive. Its product mainly consists of four parts: a magnetic field precise control system, a smart capsule endoscope, a portable recorder and a capsule locator. The person undergoing the examination needs to swallow a smart 'capsule', and a comprehensive examination of the stomach can be achieved in about 15 minutes. . Capsule endoscopy robot gastroscopy is highly efficient and complementary to traditional gastroscopy. The capsule can be used for one time without the risk of cross-infection, pain, injury, anesthesia, or psychological barriers. It can complete a full range of gastric and small intestine examinations without blind spots, and is suitable for gastric examination. Health screening for gastrointestinal diseases and early cancers in the head and small intestine.
