The global Magnetic Drive Capsule Robot market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

According to our research, the global market for medical devices is estimated at US\$ 603 billion in the year 2023, and will be growing at a CAGR of 5% during next six years. The global healthcare spending contributes to occupy 10% of the global GDP and is continuously rising in recent years due to the increasing health needs of the aging population, the growing prevalence of chronic and infectious diseases and the expansion of emerging markets. The medical devices market plays a significant role in the healthcare industry. The market is driven by several factors, including the increasing demand for advanced healthcare services globally, advancements in medical technology, growing geriatric population, rising healthcare expenditure, and increasing awareness about early disease diagnosis and treatment.

The capsule endoscopy robot system project is the world's first actively controlled capsule endoscopy robot system technology. There is a major technological breakthrough for the actively controlled second-generation capsule endoscopy robot, which can significantly improve inspection results and performance through precise control and positioning. It is reliable, the examination of the stomach is very convenient, fast and comprehensive. Its product mainly consists of four parts: a magnetic field precise control system, a smart capsule endoscope, a portable recorder and a capsule locator. The person undergoing the examination needs to swallow a smart 'capsule', and a comprehensive examination of the stomach can be achieved in about 15 minutes. . Capsule endoscopy robot gastroscopy is highly efficient and complementary to traditional gastroscopy. The capsule can be used for one time without the risk of cross-infection, pain, injury, anesthesia, or psychological barriers. It can complete a full range

of gastric and small intestine examinations without blind spots, and is suitable for gastric examination. Health screening for gastrointestinal diseases and early cancers in the head and small intestine.
