## Abstracts

The global Magnetic Drive Gear Pump market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Magnetic drive gear pump is a specialized industrial pump that employs magnetic coupling to transmit torque from the motor to the impeller and eliminate the need for a mechanical seal. A driven or inner magnet is sealed within the pump head by the pump body, o-ring and magnet cup. The inner magnet is a wetted component and is encapsulated by molding or a metal shell. The driving magnet turns the driven magnet without physical contact. The inner magnet is directly connected to the driving gear.
