## Abstracts

The global Magnetic Drive Pumps market size is expected to reach \$ 736.2 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

In the global market, the key players of Magnetic Drive Pumps are mainly Flowserve, Sundyne, Iwaki and others. The top three players within this industry account for more than 10% of the market share. North America, Europe, and Asia Pacific are the major manufacturing regions for this product, with North America accounting for nearly 40% of the global market share. The product can be categorised into fixed and rotary shafts based on the type of product. The product is widely used in chemical, general industrial, oil & gas, food & pharmaceutical, and other industries.

This report studies the Magnetic Drive Pumps market.

'Magnetic Drive' refers to the coupling between the wet end of the pump and the motor. In 'direct drive' pumps, the impeller of the pump is attached to the shaft of the motor, and this design depends on the shaft seal to contain the chemical. In a magnetic drive pump, the wet end and motor are two separate contained parts, connected by only a motor bracket. At the end of the motor shaft, a drive magnet is attached, and as the drive magnet rotates around the rear housing, the impeller, which is fixed upon another magnet, spins in synchronization. It is the attraction of the drive magnet and the impeller magnet which allows the full torque of the motor to be passed onto the pump. As the shaft of the motor does not extend into the interior of the pump, there is no need for a shaft seal, and without a shaft seal, the danger of leakage commonly associated with a shaft seal is eliminated. Furthermore, the maintenance cost is reduced because no time or money is spent on maintaining the shaft seal.

This report studies the global Magnetic Drive Pumps production, demand, key manufacturers, and key regions.
