According to our (Global Info Research) latest study, the global Magnetic Incremental Encoders market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

The incremental encoder converts the displacement into a periodic electrical signal, and then converts the electrical signal into a count pulse, and uses the number of pulses to indicate the size of the displacement. According to the working principle, the encoder can be divided into incremental and absolute encoders. two categories.
