The global Magnetic Insect Screen market size is expected to reach \$ 437 million by 2032, rising at a market growth of 2.9% CAGR during the forecast period (2026-2032).

In 2025, global sales of Magnetic Insect Screen reached approximately 70 million units, with an average market price of about USD 5 per unit, an annual production capacity of roughly 78 million units, and an industry-average gross margin of approximately 30%.

A Magnetic Insect Screen is a flexible insect screen that uses magnetic strips or clasps for automatic closure, typically made from fiberglass, polyester, or nylon mesh. It attaches to door or window frames via hook-and-loop tape, adhesive strips, or simple frames, offering no-drill installation, easy removal, and washable use for insect prevention and ventilation.

Upstream supplies include mesh fabrics (fiberglass/polyester/nylon), magnetic strips, PVC/webbing, adhesives, and packaging; midstream involves cutting, sewing, magnet insertion, and kitting; downstream consumption is driven by residential doors and windows, rental apartments, patios/balconies, and seasonally strong summer sales via retail, e-commerce, and hardware channels.

This report studies the global Magnetic Insect Screen production, demand, key manufacturers, and key regions.
