Abstracts

According to our (Global Info Research) latest study, the global Magnetic Knife Strip market size was valued at US\$ 450 million in 2025 and is forecast to a readjusted size of US\$ 675 million by 2032 with a CAGR of 6.0% during review period.

In 2026, global production of Magnetic Knife Strips is projected to reach approximately 8.5 million units, with average selling prices ranging from US\$15–\$35 for standard stainless steel models to US\$60–\$120 for premium hardwood strips integrated with rare-earth magnets. Manufacturers in this segment typically see gross margins of 30% to 50%, driven by the balance of aesthetic design and material quality. A magnetic knife strip is a wall-mounted kitchen tool designed to store cutlery securely and accessibly. Its core principle involves embedding powerful magnets—often Neodymium—behind a protective surface, creating a continuous magnetic field that holds blades firmly in place while preserving their sharpness by avoiding contact with other utensils.

The upstream supply chain includes suppliers of ferritic magnets, high-grade wood (like walnut or acacia), and brushed metals. The downstream market serves professional culinary institutions, home kitchen retailers, and interior design firms. These strips are essential for modern, space-efficient kitchen organization and support the growing trend of minimalist home decor, ultimately enhancing kitchen safety and tool longevity.
