## Abstracts

The global Magnetic Levitation Concept Automobile market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

A magnetic levitation automobile, is a type of vehicle that uses magnetic levitation to lift and propel itself above the ground without any physical contact with the surface.

Maglev technology involves the use of strong magnetic fields to lift and propel the vehicle forward, which allows for a smooth and efficient ride. The absence of friction between the vehicle and the ground can also reduce energy consumption and noise pollution.

Currently, maglev cars are not yet commercially available and still in the experimental stage.
