According to our (Global Info Research) latest study, the global Magnetic Levitation Expansion Generator market size was valued at US\$ 959 million in 2024 and is forecast to a readjusted size of USD 1348 million by 2031 with a CAGR of 5.0% during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

The magnetic levitation expansion generator is a new type of high-efficiency power generation equipment that combines magnetic levitation bearing technology with the principle of expansion power. It is mainly used for the recycling of low-grade thermal energy (such as industrial waste heat, geothermal energy, solar thermal energy, etc.) or pressure difference energy. It generates electricity by driving the high-speed rotating axis through the expansion of the working fluid, and the magnetic levitation technology replaces the traditional mechanical bearings to achieve contactless, lubrication-free, high-speed, and low-loss operation. The equipment has the characteristics of high efficiency, low maintenance cost, compact size, and strong adaptability. It is particularly suitable for medium and low temperature distributed energy recovery and green energy systems. It is one of the important development directions of energy conservation, emission reduction, and carbon neutrality technology.
