## Abstracts

According to our (Global Info Research) latest study, the global Magnetic Levitation Motors market size was valued at US\$ 84.9 million in 2024 and is forecast to a readjusted size of USD 117 million by 2031 with a CAGR of 4.7% during review period.

A magnetic levitation motor is a type of motor that utilizes magnetic force to suspend the rotor above the stator and achieves rotational motion through the principle of electromagnetic induction. It primarily relies on the interaction between electromagnetic forces or the magnetic fields of permanent magnets to maintain a certain gap between the rotor and the stator, thereby avoiding mechanical contact. This results in reduced friction losses, increased efficiency, and an extended service life. This motor integrates magnetic levitation technology with motor technology, where during operation, the levitation system and the drive system collaborate to ensure stable motor operation.
