The global Magnetic Liquid Level Indicator market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Magnetic Liquid Level Indicator is a device used to measure the level of liquid in a container. It consists of a float that contains a magnet and a magnetic sensor outside the container. As the liquid level changes, the float moves up and down, and the magnetic sensor detects the change in position of the magnet, which is then converted into a level reading.
