Abstracts

Magnetic microspheres particle is a new kind of magnetic material developed in recent years. It is a kind of composite microsphere with a certain magnetism and special structure formed by combining magnetic inorganic particles with the organic macromolecule. Magnetic composite microspheres not only have many characteristics of common polymer microspheres but also have a magnetic response, so they can not only be endowed with surface functional groups by means of copolymerization and surface modification, but it can also be guided by an external magnetic field.
