The global Magnetic Particle Clutch-Brake market size is expected to reach \$ 1438 million by 2032, rising at a market growth of 4.5% CAGR during the forecast period (2026-2032).

Magnetic Particle Clutch-Brake are a type of electromechanical component that uses a magnetic field to control the shearing of magnetic particles to transmit torque. Their core advantages are continuously adjustable torque, smooth control, and the ability to operate with slip for extended periods (within limits of heat dissipation). Therefore, they are commonly used in industrial applications such as coil tension control, soft start/soft brake, and load simulation.
