Abstracts

The global Magnetic Pump market size is expected to reach \$ 762.1 million by 2029, rising at a market growth of 3.4% CAGR during the forecast period (2023-2029).

Global 5 largest manufacturers of Magnetic Pump are Flowserve, Sundyne, Iwaki, Hermetic and Dickow Pumpen, which make up over 20%. Among them, Flowserve is the leader with about 5% market share.

Asia Pacific is the largest market, with a share about 38%, followed by Europe and North America, with the share about 31% and 24%. In terms of product type, Stationary Shaft occupies the largest share of the total market, about 72%. And in terms of application, the largest application is Chemical, followed by General Industry.

'Magnetic Drive' refers to the coupling between the wet end of the pump and the motor. In 'direct drive' pumps, the impeller of the pump is attached to the shaft of the motor, and this design depends on the shaft seal to contain the chemical. In a magnetic drive pump, the wet end and motor are two separate contained parts, connected by only a motor bracket. At the end of the motor shaft, a drive magnet is attached, and as the drive magnet rotates around the rear housing, the impeller, which is fixed upon another magnet, spins in synchronization. It is the attraction of the drive magnet and the impeller magnet which allows the full torque of the motor to be passed onto the pump. As the shaft of the motor does not extend into the interior of the pump, there is no need for a shaft seal, and without a shaft seal, the danger of leakage commonly associated with a shaft seal is eliminated. Furthermore, the maintenance cost is reduced because no time or money is spent on maintaining the shaft seal.
