According to our (Global Info Research) latest study, the global Magnetic Reactor market size was valued at USD million in 2023 and is forecast to a readjusted size of USD million by 2030 with a CAGR of % during review period.

The magnetic reactor adopts a static sealing structure, and a magnetic coupling is used to connect the stirrer and motor drive. Due to its non-contact transmission torque, the static seal is used instead of the dynamic seal, which can completely solve the leakage problem that the previous mechanical seal and packing seal could not solve. Make the entire medium and all stirring parts work in an absolutely sealed state.
