Abstracts

The global Magnetic Recharger market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Magnetic Recharger is a type of device that uses electromagnetic induction to provide electricity to portable devices without needing to be precisely aligned or make electrical contact with a dock or plug. It consists of a primary coil in the charger that induces a current in the secondary coil in the device being charged. The current can be adjusted by changing the frequency or the distance between the coils. Magnetic Rechargers are also known as wireless chargers or cordless chargers.

The upstream industry chain of Magnetic Rechargers includes the production of neodymium magnets, which are the strongest type of permanent magnet available commercially and are made from an alloy of neodymium, iron, and boron. Neodymium magnets are used in the induction coils of Magnetic Rechargers to create a strong magnetic field. The downstream industry chain of Magnetic Rechargers includes the applications of wireless charging in various sectors, such as electric vehicles, power tools, electric toothbrushes, medical devices, and consumer electronics.

This report studies the global Magnetic Recharger production, demand, key manufacturers, and key regions.
