According to our (Global Info Research) latest study, the global Magnetic Recording Material market size was valued at US\$ million in 2024 and is forecast to a readjusted size of USD million by 2031 with a CAGR of %during review period.

In this report, we will assess the current U.S. tariff framework alongside international policy adaptations, analyzing their effects on competitive market structures, regional economic dynamics, and supply chain resilience.

Magnetic recording materials refer to magnetic materials that utilize their magnetic properties and effects to input, record, store, and output information such as images and numbers. Divided into magnetic recording medium materials and magnetic head materials. The former mainly completes the recording and storage functions of information, while the latter mainly completes the writing and reading functions of information. According to their morphology, they are divided into two types: granular and continuous thin film materials, and according to their properties, they are further divided into metallic and non-metallic materials. The widely used magnetic recording medium at present is the  $\gamma$ -Fe<sub>2</sub>O<sub>3</sub> series material, and commonly used magnetic head materials include alloy magnetic head materials, ferrite magnetic head materials, amorphous magnetic head materials, etc. They are widely used in broadcasting, film, television, education, medical care, automatic control, geological exploration, electronic computing technology, military, aerospace, and daily life.
