Abstracts

The global Magnetic Slot Wedges market size is expected to reach \$ million by 2030, rising at a market growth of % CAGR during the forecast period (2024-2030).

Magnetic Slot Wedges are made by adding magnetic conductive materials to the materials used for making ordinary groove wedges, and then hot pressing and curing them. Mainly composed of thermosetting matrix resin, reinforced glass fiber, and magnetic powder. Matrix resin and reinforcing fibers are used to improve the mechanical properties and heat resistance of groove wedges, while magnetic substances improve the conductivity and magnetic conductivity of groove wedges. Efficient motors are a concrete manifestation of production promotion, environmental protection and energy conservation in practical applications
