Abstracts

According to our (Global Info Research) latest study, the global Magnetic Solid Phase Extractor market size was valued at US\$ 227 million in 2025 and is forecast to a readjusted size of US\$ 366 million by 2032 with a CAGR of 7.1% during review period.

In 2025, the global production of magnetic solid phase extractors reached 4,529 units, with an average selling price of US\$45,700 per unit. The global annual production capacity for magnetic solid phase extractors is approximately 8,000 units, and the gross profit margin is about 27.4%. A magnetic solid phase extractor is a type of specialized equipment or system designed to perform the magnetic solid phase extraction (MSPE) process. MSPE is a sample pretreatment technique that utilizes magnetic materials as the sorbent phase and achieves the extraction, enrichment, and purification of target analytes through magnetic separation. The upstream supply chain for magnetic solid phase extractors includes immunomagnetic beads, magnetic materials, and electromagnetic/permanent magnet separation modules, while the midstream sector consists of magnetic solid phase extractor manufacturers, and the downstream sectors are mainly environmental testing, food safety, biomedicine, and other industries.

Currently, the global market for magnetic solid phase extractors is experiencing rapid growth. As environmental monitoring, food safety testing, and biomedical analysis place ever-increasing demands on sample pretreatment efficiency, selectivity, and automation, this novel pretreatment equipment?which utilizes magnetic materials as the sorbent phase and achieves target analyte extraction and enrichment through magnetic separation?is gradually replacing traditional solid phase extraction methods, thanks to its advantages of simple operation, fast extraction, and excellent purification performance, and has become a key technological tool in laboratory analytical

workflows. On the technological front, products are continuously innovating toward high-throughput parallel processing, fully automated operating systems, the development of functional magnetic beads with smaller particle sizes, and multi-mode hyphenation, in order to meet the differentiated requirements of various sample matrices and trace analyte detection. Meanwhile, the continuous tightening of regulatory standards and the internal drive for laboratory quality improvement and efficiency enhancement are fostering a favorable environment for market growth. The competitive focus within the industry is also gradually shifting from a comparison of standalone equipment performance to a comprehensive evaluation involving magnetic bead reagent compatibility, methodology development, and total solution provisioning capabilities, driving the entire industry toward higher sensitivity, stronger stability, and broader applicability.
