According to our (Global Info Research) latest study, the global Magnetically Coupled Rodless Cylinder market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Magnetically Coupled Rodless Cylinder refers to the cylinder that uses the piston to connect the external actuator directly or indirectly, and makes it follow the piston to realize reciprocating motion. The biggest advantage of this type of cylinder is that it saves installation space. A set of permanent magnetic rings with high strength magnetism is installed on the piston. The magnetic force line acts on another set of magnetic rings inside the outer slide block through the thin wall cylinder. Since the two sets of magnetic rings are opposite, they have a strong mutual suction force. When the piston is pushed by air pressure in the cylinder, the piston moves. At the same time, the magnetic ring in the external slider is affected by the magnetic force line of the magnetic ring on the piston and moves synchronously.
