The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Magneto bearings are a type of magnetic bearing used in machinery and equipment. These bearings use magnetic forces to support rotating components, rather than traditional mechanical bearings that rely on physical contact between two surfaces. Magneto bearings have the advantage of being able to operate without any lubrication, resulting in reduced friction and wear. They are commonly used in high-speed rotating equipment such as turbines and compressors, where traditional bearings may wear out quickly. Magneto bearings also have applications in aerospace, medical devices, and other industries where high precision and reliability are essential.
