According to our (Global Info Research) latest study, the global Magneto-optic Kerr Effect Measure System market size was valued at US\$ 147 million in 2024 and is forecast to a readjusted size of USD 189 million by 2031 with a CAGR of 3.3% during review period.

The magneto-optic Kerr effect measurement system is an ultra-high sensitivity magnetometer designed based on the principle of magneto-optical effect. It consists of an electromagnet, an optical platform, a laser, a CCD imaging device and an optical path system. By detecting the changes in the intensity of reflected light on the surface of the magnetic sample, the hysteresis loop of the sample can be obtained, and through the hysteresis loop, the Kerr angle and ellipticity of the sample can be calculated.
