According to our (Global Info Research) latest study, the global Magnetorheological Elastomers (MREs) market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period. The influence of COVID-19 and the Russia-Ukraine War were considered while estimating market sizes.

Magneto-Rheological Elastomer(MRE), a mixture of magnetic particles and elastic substances (e.g. natural or synthetic rubber), is one of the smart materials controlled by an external magnetic field generated from the induced current. It is soft and flexible when there is no magnetic field applied, but it dramatically changes its structure and brings stiffness as magnetic field is applied. The level of stiffness varies depending on the types of magnetic particles and elastic substances.
