Abstracts

The global Magnetorheological Elastomers (MREs) market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

Magneto-Rheological Elastomer(MRE), a mixture of magnetic particles and elastic substances (e.g. natural or synthetic rubber), is one of the smart materials controlled by an external magnetic field generated from the induced current. It is soft and flexible when there is no magnetic field applied, but it dramatically changes its structure and brings stiffness as magnetic field is applied. The level of stiffness varies depending on the types of magnetic particles and elastic substances.

This report studies the global Magnetorheological Elastomers (MREs) production, demand, key manufacturers, and key regions.

This report is a detailed and comprehensive analysis of the world market for Magnetorheological Elastomers (MREs), and provides market size (US\$ million) and Year-over-Year (YoY) Growth, considering 2022 as the base year.
