According to our (Global Info Research) latest study, the global Magnetostriction Level Meter market size was valued at USD million in 2022 and is forecast to a readjusted size of USD million by 2029 with a CAGR of % during review period.

A magnetostriction level meter is a type of liquid level measurement device that utilizes the principle of magnetostriction to determine the level of a liquid in a tank or vessel. Magnetostriction is the property of certain materials to change shape or dimensions when subjected to a magnetic field.

In a magnetostriction level meter, a probe or waveguide made of magnetostrictive material is inserted into the liquid-filled tank. A current pulse is sent through the probe, generating a magnetic field around it. When the magnetic field interacts with the liquid, it causes the magnetostrictive material to undergo mechanical strain, resulting in a torsional or longitudinal vibration of the probe.
