## Abstracts

The global Magnetostriction Level Meter market size is expected to reach \$ million by 2029, rising at a market growth of % CAGR during the forecast period (2023-2029).

In a magnetostriction level meter, a probe or waveguide made of magnetostrictive material is inserted into the liquid-filled tank. A current pulse is sent through the probe, generating a magnetic field around it. When the magnetic field interacts with the liquid, it causes the magnetostrictive material to undergo mechanical strain, resulting in a torsional or longitudinal vibration of the probe.

A magnetostriction level meter is a type of liquid level measurement device that utilizes the principle of magnetostriction to determine the level of a liquid in a tank or vessel. Magnetostriction is the property of certain materials to change shape or dimensions when subjected to a magnetic field.

This report studies the global Magnetostriction Level Meter production, demand, key manufacturers, and key regions.
